

## SharePoint Architect/Developer

Are you looking to be part of a growing organization? Are you looking for a place to turn your ideas into solutions? Well look no further, at MetroStar Systems, a Microsoft Gold Certified Partner; we have what you are looking for, a fast paced, friendly environment with incredible growth potential. We offer the ability to work with cutting edge Microsoft technology, personalized career development plans and the opportunity to become the next Metro"STAR."

### Job Description:

The SharePoint Architect serves as the primary individual for analysis, design, development, deployment, and overall project management for SharePoint (MOSS). This position requires expert knowledge of Microsoft SharePoint Architecture and a working knowledge of related technologies such as: SQL Server 200x, Internet Information Server, Active Directory, and Microsoft Office desktop application integration with SharePoint. A demonstrated ability to manage a large scale deployment of SharePoint and integrate other technologies is necessary. The SharePoint Architect analyzes the Institution's information architecture, understands institutional and departmental requirements, to design and develop organizational taxonomies, policies, procedures, and solutions. The candidate works closely with developers to provide custom solutions as necessary. This individual must be highly motivated in this area of computing in order to stay current with present trends and activities. The incumbent will function well as a leader and team member for assigned projects. Strong .Net development skills (C#) and demonstrated web part/customization experience is a must.

### Required Skills:

- MCTS certifications in Microsoft Office SharePoint Services (MOSS) configuration and/or development preferred.
- 5 years related Information Technology experience required that includes deployment and development with Microsoft Office SharePoint Services (MOSS)
- Understand each customer's development and production requirements and goals
- Understand, assess, and propose solutions for resolving customer questions and issues
- Design and implement solutions with java-based applications
- Experience in Web server configuration and architecture
- Specific experience with SharePoint 2007 platform required
- Building Intranet portals and collaboration solutions using MS SharePoint
- Converting existing content, sites, and services into SharePoint 2007
- Building features, Web parts, etc. for SharePoint
- Integrating the portal with other corporate data sources, applications, and knowledge management systems
